March 2015

www.pestclear.ie

Since we started up in 1997 nearly a quarter of a million people have bought a product from our Outdoor Animal and Bird Repeller range.

Our very first product was in this striking yellow colour scheme and it retailed for around £ 40.00 which is about € 50.00 in today's money.

Over the years, we kept redesigning, improving the specification, and updating the products, and two years ago we launched the current range. The new outdoor repeller has no less than four powerful ultrasound speakers, a choice of three frequencies to target a wide range of animals, a passive infrared heat sensor to automatically activate the sounds, and an easy-to use mounting kit, suitable for setting it up on the ground or on a convenient wall or fence.

This product is powered by an adapter with a 30 ft extension lead, and it is a fully self contained kit with everything you need to protect your garden from cats, dogs, rats, squirrels, foxes, badgers, even deer. With a 75 ft range, it is suitable for even large gardens, and it is used extensively in bowling clubs, golf courses, stable yards etc.

Where to Buy

In Ireland, all of the PestClear products are available from our extensive network of retailers. Check our website www.pestclear.ie to see if there is a retailer in your area. Some retailers specialise in certain product ranges, and we would love to put you in touch with your nearest stockist, where you will find local knowledge, service, and the keenest prices.

Buying Online

We always encourage customers to support local retailers, but if this is not convenient, you can always buy online. Once again, check out www.pestclear.ie for details.

Mild Winter = lots of mice and rats

The unusually mild winter has led to a massive increase in the numbers of mice and rats surviving into Spring. These pests breed prolifically, and if they make a nest in your home they can be hard to shift. Pest Repellers need to be replaced about every 5 years or so, to ensure they are working at peak efficiency. All PestClear repellers carry a date label, and we would be happy to decipher this for you, to let you know if your repeller is nearing the end of its useful life.

New PestClear Slimline Range

The new Slimline range of repellers (model 4000 pictured) are our most powerful yet. Developed from the award winning Classic range, and launched in 2012, these products use less electricity, but cover a larger area than any other product on the market. Remember, if it doesn't say PestClear, it's not PestClear, and we don't make repellers for anyone else, or in any other branding.

Nesting Birds

March and April are the months when birds get busy nesting. The PestClear Sonic Bird Repeller is a proven solution, with realistic sounds of a hawk or a barking dog, and a computerised distress message to scare off both large and small nesting birds.

It is pictured here with the optional solar power kit, which means it can be used even in areas that don't have access to mains power. There is also an Ultrasound version which is suitable for noise-sensitive places, such as housing estates.

Both are available from selected retailers and online. Call or make an online enquiry for the name of your nearest PestClear stockist.
